

Waste Free '23 Digest

New Waste Free '23 Projects in Action

Waste Free '23 is expanding!

- **Naivasha, Kenya** and **Hawassa, Ethiopia** now have heat presses set up, producing durable plastic panels.
- And in Ethiopia, where coffee farms and processing facilities generate massive amounts of coffee waste, the **Biochar Shack** is being set up to create biochar. This biochar can improve soils, clean water, and generate income for women who need it most.

Every new project means more waste diverted from landfills, more products created, and more jobs sustained.

BSFL vs Biochar: Which is Smarter for Waste-to-Value?

We've created the clearest comparison available anywhere online-- helping communities and organizations decide whether **Black Soldier Fly Larvae (BSFL)** or **Biochar** is the best fit for their waste stream.

✓ **BSFL:** Perfect for wet organics like food scraps or manure. Produces insect protein, oils, and fertilizer.

✓ **Biochar:** Best for woody residues or crop waste. Improves soil, locks carbon, and can even generate carbon credits.

✓ **Together:** Biochar boosts BSFL yields, while BSFL residue can be turned into biochar.

📊 The key isn't which is "better," but which fits your waste stream, market, and goals.

LinkedIn Community: 2,100+ and Growing!

Our [LinkedIn page](#) has crossed **2,100 followers**—a sign that the Waste Free '23 movement is building momentum worldwide.

We're using this platform also to:

- Promote **plastic upcyclers** creating products from mixed plastics.
- Support **BSFL innovators** transforming food waste into protein and fertilizer.
- Highlight **biochar pioneers** fighting climate change and improving soil.

And we're not just promoting them, we're **collaborating** as well, helping scale solutions, and working to accelerate waste upcycling **today more than yesterday**.
