

Greetings,

Waste Free '23 is a global network offering free training and low-cost solutions to end waste burning, dumping, and create a cleaner future. Founded in Nairobi in 2023, we've helped over 12,000 homes achieve zero waste status and created 3,900 jobs through our programs!

Here are five ways your community can work with Waste Free '23 to create a cleaner, greener future:

1. Pencils for Plastics (P4P): Organize a [P4P event](#) to raise awareness, collect plastic waste, and teach kids about sustainability. These events can even lead to the creation of [micro-recycling centers!](#)

2. Heat Press Recycling: The plastic trash is collected through [P4P program](#) or by 2/3 volunteers, Then the [trash is sorted](#) according to types. Among these LDPE, PP and soft plastics can be recycled into panels using a [heat press](#), which can be sold locally. **They can also be made into [products](#) using the [heat press](#) which can be sold.** Check out which products have already been made [here](#).

3. [Black Soldier Fly \(BSFL\) Composting:](#) Convert large amounts of organic waste into high-protein animal feed for chickens using BSFL larvae. Many collaborators have found great success with this method!

4. Solar Hybrid Community Kitchen (SHaCK): Implement a SHaCK initiative to provide a sustainable cooking solution that utilizes solar energy. This not only reduces waste but also fosters local employment and saves on fuel costs. See details about SHaCK [in this pdf](#).

5. Toilet Waste Fertilizer & Diaper Road Repair: We process toilet waste into valuable fertilizer and even [recycle diapers](#) for use in road

repair!

Join Our Facebook Group to Keep Updated with Our Work and Progress!

By working together, we can create a significant positive impact on our environment.

Thank you for your time and consideration!
